## Forward-Looking Information

*This presentation includes certain "forward-looking information" and "forward-looking statements" (collectively "forward-looking statements") within the meaning of applicable Canadian securities legislation. All statements in this news release that address events or developments that we expect to occur in the future are forward-looking statements. Forward-looking statements are statements that are not historical facts and are identified by words such as "expect", "plan", "anticipate", "project", "target", "potential", "schedule", "forecast", "budget", "estimate", "assume", "intend", "strategy", "goal", "objective", "possible" or "believe" and similar expressions or their negative connotations, or that events or conditions "will", "would", "may", "could", "should" or "might" occur. Forward-looking statements in this presentation include but are not limited to the Company's expectations of gold production and production growth; the upside potential of the Valentine Gold Mine; the Valentine Gold Mine achieving first gold production during the second quarter of 2025; the Company's reinvestment into its existing portfolio of properties for further exploration and growth; statements relating to the Company's 2024 priority resource expansion opportunities; the Company's metal price and cut-off grade assumptions. Forward-looking statements necessarily involve assumptions, risks and uncertainties, certain of which are beyond Calibre's control. For a listing of risk factors applicable to the Company, please refer to Calibre's annual information form ("AIF") for the year ended December 31, 2023, its management discussion and analysis for the year ended December 31, 2023 and other disclosure documents of the Company filed on the Company's SEDAR+ profile at [www.sedarplus.ca](http://www.sedarplus.ca).*

*Calibre's forward-looking statements are based on the applicable assumptions and factors management considers reasonable as of the date hereof, based on the information available to management at such time. Calibre does not assume any obligation to update forward-looking statements if circumstances or management's beliefs, expectations or opinions should change other than as required by applicable securities laws. There can be no assurance that forward-looking statements will prove to be accurate, and actual results, performance or achievements could differ materially from those expressed in, or implied by, these forward-looking statements. Accordingly, undue reliance should not be placed on forward-looking statements.*

*All figures are expressed in U.S. dollars unless otherwise stated.*

# Q3 & YTD 2024 Business Update

## Q3 2024

- ▲ Consolidated Q3 gold sales of 46,076 ounces
  - ▲ Nicaragua 36,427 ounces and Nevada 9,649 ounces
- ▲ Consolidated Q3 Total Cash Cost<sup>2</sup> (“TCC”) of \$1,580/oz
- ▲ Consolidated Q3 All-In Sustaining Cost<sup>2</sup> (“AISC”) of \$1,946/oz

## Year-To-Date 2024

- ▲ Consolidated YTD gold sales of 166,200 ounces
  - ▲ Nicaragua 140,646 ounces and Nevada 25,554 ounces
- ▲ Consolidated YTD TCC of \$1,379/oz
- ▲ Consolidated YTD AISC of \$1,656/oz

## Q4 Forecast & 2024 Guidance

- ▲ Consolidated Q4 production is expected to be 70,000-80,000 ounces driven by increased tonnes and grade from Nicaragua, including a 30,000 ounces stockpile build available for processing in 2025
- ▲ Consistent with YTD performance, full year spend is anticipated to be in line with budget, with lower ounces sold resulting in higher TCC and AISC

## Valentine Gold Mine as at September 30, 2024

- ▲ Calibre has incurred costs of C\$547 million. Estimated initial project capital has increased to C\$744 million, with remaining costs to complete of C\$197 million
- ▲ With ~C\$300 million in cash [US\$115.8 million and restricted cash of US\$100 million] Valentine’s initial project capital remains fully funded and is on track to deliver first gold in Q2 2025

## Revised 2024 Guidance

	Consolidated	Nicaragua	Nevada
Gold Production/Sales (ounces)	230,000 - 240,000	200,000 - 210,000	34,000 - 36,000
Total Cash Costs (\$/ounce) <sup>2</sup>	\$1,300 - \$1,350	\$1,300 - \$1,350	\$1,450 - \$1,500
AISC (\$/ounce) <sup>2</sup>	\$1,550 - \$1,600	\$1,450 - \$1,500	\$1,650 - \$1,700
Growth Capital (\$ million)*		\$60 - \$70	
Exploration Capital (\$ million)		\$40 - \$45	

\*Initial Project Capital at the Valentine Gold Mine not included

## Valentine Primary Crusher

1. Refer to the Calibre News Release dated October 18, 2024 News release available at [www.calibremining.com](http://www.calibremining.com) or [www.sedarplus.ca](http://www.sedarplus.ca)  
 2. Refer to the Non-IFRS Measures section of the Calibre Disclosure Notes at the end of this presentation and at the end of the Calibre News Release dated October 18, 2024.

# Valentine: Production Growth

## Project Progress

- ▲ Overall construction progress 81% complete<sup>1</sup>
- ▲ Tailings Management Facility is complete and ready to receive water
- ▲ CIL leaching area tank construction is nearing completion
- ▲ Reclaim tunnel and coarse ore stockpile construction is progressing
- ▲ Primary crusher installation is well advanced and overland conveyer construction has commenced, and
- ▲ Pre-commissioning is underway

## Initial Project Capital

- ▲ Calibre has incurred costs of C\$547 million. Estimated initial project capital has increased to C\$744 million, with remaining costs to complete of C\$197 million
- ▲ With ~C\$300 million in cash [US\$115.8 million and restricted cash of US\$100 million] Valentine's initial project capital remains fully funded and is on track to deliver first gold in Q2 2025

## Overview

- ▲ Significant mineral endowment, with exceptional exploration upside
  - ▲ 2.7 Moz of Mineral Reserves<sup>2</sup>
  - ▲ 4.0 Moz of Measured and Indicated Mineral Resources<sup>2</sup>
  - ▲ 1.1 Moz of Inferred Mineral Resources<sup>2</sup>
- ▲ Technical studies underway on the expansion opportunity with Phase 2 throughput increase

Process Plant

1. Refer to Calibre News Release dated October 18, 2024 and found at [www.calibremining.com](http://www.calibremining.com) and [www.sedarplus.ca](http://www.sedarplus.ca).  
2. Refer to Calibre News Release dated March 12, 2024 and found at [www.calibremining.com](http://www.calibremining.com) and [www.sedarplus.ca](http://www.sedarplus.ca).  
3. Refer to Calibre Q3 2024 News Release dated October 17, 2024 and found at [www.calibremining.com](http://www.calibremining.com) and [www.sedarplus.ca](http://www.sedarplus.ca).

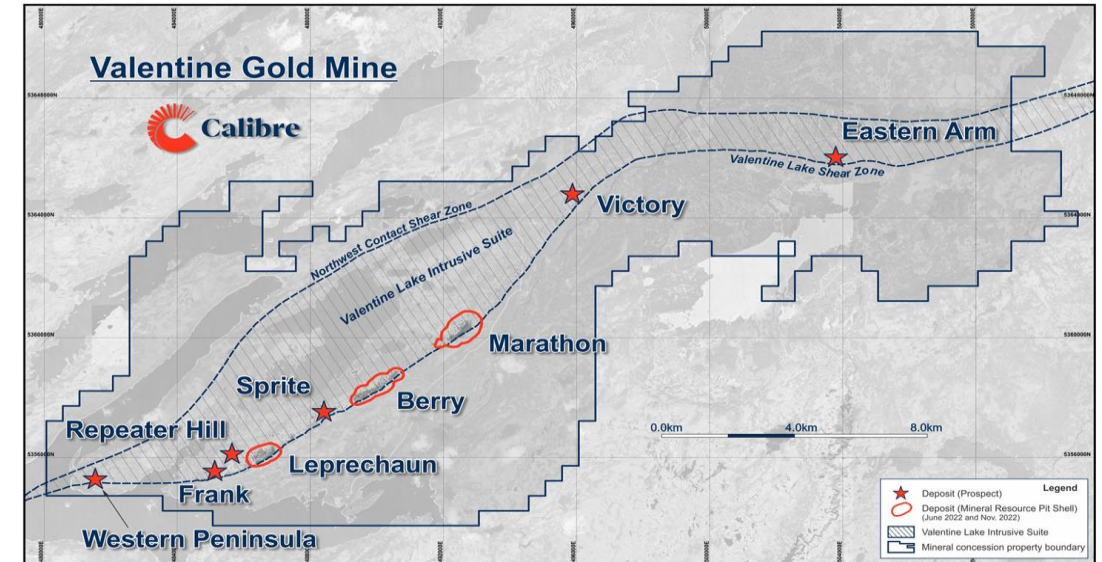

Thank you.

# Valentine: Uncovering the Next Gold Camp

## Vast Potential Along 32km Valentine Lake Shear Zone (VLSZ)

- ▲ 100,000m exploration and discovery drill program underway
- ▲ To date, 5 deposits identified for 5Moz Mineral Resource
  - ▲ Exploration was only focused on 6km of VLSZ
  - ▲ Feasibility included 3-pit operation: Leprechaun, Marathon and Berry
    - ▲ Expansion potential below the current open pits
    - ▲ Potential to extend Marathon pit to NE
  - ▲ Sprite & Victory not yet included
  - ▲ Near term resource potential to the SW at Frank & Repeater Hill
  - ▲ 65% of the VLSZ remains untested
- ▲ 2024 diamond drilling at Leprechaun SW, Frank, Repeater Hill, Marathon Northeast, Eastern Arm & Western Peninsula
- ▲ Greenfield target identification: trenching / drilling and property wide geophysics

QTP-Au veining exposed at the Marathon Deposit

QTP-Au veining exposed at Leprechaun Pond, 2011

# Calibre Disclosure

---

## Qualified Persons & Technical Disclaimers for the December 31, 2023 Nicaraguan, Nevada and Newfoundland, Canada Mineral Reserves and Resources

All estimates have been prepared using CIM (2014) definitions. Mineral resources that are not mineral reserves do not have demonstrated economic viability. Mineral Resources are inclusive of Mineral Reserves. 10. Numbers may not add due to rounding.

David Schonfeldt, P. Geo, Corporate Chief Geologist, Calibre Mining Corp. and a "Qualified Person" under National Instrument 43-101 has reviewed and approved the scientific and technical information contained in this presentation.

## Cautionary Note to U.S. Investors Concerning Estimates of Mineral Reserves and Resources

This presentation has been prepared in accordance with the requirements of Canadian securities laws, which differ from the requirements of U.S. securities laws. Unless otherwise indicated, all mineral reserve and mineral resource estimates included in this presentation have been prepared in accordance with NI 43-101 and the Canadian Institute of Mining, Metallurgy and Petroleum classification system. NI 43-101 is a rule developed by the Canadian Securities Administrators that establishes standards for all public disclosure an issuer makes of scientific and technical information concerning mineral projects. Canadian public disclosure standards, including NI 43-101, differ significantly from the requirements of the United States Securities and Exchange Commission (the "SEC"), and information concerning mineralization, deposits, mineral reserve and mineral resource information contained or referred to herein may not be comparable to similar information disclosed by U.S. companies. In particular, and without limiting the generality of the foregoing, this presentation uses the terms "measured mineral resources", "indicated mineral resources", "inferred mineral resource estimate". U.S. investors are advised that, while such terms are recognized and required by Canadian securities laws, the SEC has not recognized them. The requirements of NI 43-101 for identification of "reserves" are not the same as those of the SEC, and mineral reserves reported by the Company or Fiore, as applicable, in compliance with NI 43-101 may not qualify as "reserves" under SEC standards. Under U.S. standards, mineralization may not be classified as a "reserve" unless the determination has been made that the mineralization could be economically and legally produced or extracted at the time the reserve determination is made. U.S. investors are cautioned not to assume that any part of a "measured resource" or "indicated resource" will ever be converted into a "reserve". U.S. investors should also understand that "inferred resources" have a great amount of uncertainty as to their existence and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of "inferred resources" exist, are economically or legally mineable or will ever be upgraded to a higher category. Under Canadian securities laws, estimated "inferred resources" may not form the basis of feasibility or pre-feasibility studies except in rare cases. Disclosure of "contained ounces" in a mineral resource is permitted disclosure under Canadian securities laws. However, the SEC normally only permits issuers to report mineralization that does not constitute "reserves" by SEC standards as in place tonnage and grade, without reference to unit measures. Accordingly, information concerning mineral deposits set forth herein may not be comparable with information made public by companies that report in accordance with U.S. standards.

# Notes to the Nicaragua and Nevada Mineral Reserve and Resource Slides

## Note 1 – La Libertad Complex Mineral Resource Notes

1. CIM (2014) definitions were followed for Mineral Resources.

2. Mineral Resources are inclusive of Mineral Reserves.

3. Mineral Resources are estimated assuming long-term gold prices from US\$1,500/oz to US\$1,700/oz and long-term silver prices of US\$20/oz to US\$24/oz.

4. Open pit Mineral Resources are reported within an optimized pit shell above cut-off grades ranging from 0.68 g/t Au to 2.42 g/t Au.

5. Minimum mining widths of approximately 1.0 to 2.0 m were used to model Underground Mineral Resources.

6. Underground Mineral Resources are reported within mineralization wireframes at block cut-off grades from 2.00 g/t Au to 2.90 g/t Au, where grade, continuity, and thickness were used to demonstrate Reasonable Prospects for Eventual Economic Extraction, or within resource panels generated at cut-off grades from 2.58 g/t Au to 3.59 g/t Au. Exception:

a. The East Dome underground Mineral Resource Estimate used a block cut-off grade of 0.42 g/t Agues. Gold equivalent values were calculated using the formula:  $AuEq (g/t) = Au (g/t) + Ag (g/t)/101.8$ .

7. Bulk densities vary by deposit and weathering stage and range from 1.70 t/m<sup>3</sup> to 2.65 t/m<sup>3</sup>.

8. Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability.

9. Numbers may not add due to rounding.

The Qualified Person (QP) is not aware of any environmental, permitting, legal, title, taxation, socio-economic, marketing, political, or other relevant factors that could materially affect the Mineral Resource estimate.

## Note 2 – La Libertad Complex Mineral Reserve Notes

1. CIM (2014) definitions were followed for Mineral Reserves.

2. All Mineral Reserves are classified as Probable Mineral Reserves.

3. Mineral Reserves are estimated assuming long-term gold prices from US\$1,500/oz to US\$1,600/oz and long-term silver prices from US\$20/oz to US\$26/oz.

4. Open pit Mineral Reserves are estimated at the cut-off grades ranging from 0.74 g/t Au to 1.98 g/t Au.

5. All open pit Mineral Reserve estimates incorporate dilution built in during the re-blocking process and assume 100% mining recovery.

6. Underground Mineral Reserves are estimated at fully costed cut-off grades ranging from 2.90 g/t Au to 3.42 g/t Au, and incremental cut-off grades ranging from 1.68 g/t Au to 2.41 g/t Au.

7. All underground Mineral Reserve estimates incorporate estimates of dilution and mining losses.

8. Minimum mining widths ranging from 1.5 m to 2.0 m are used for UG Mineral Reserves reporting depending on orebody geometry and mining methods.

9. Mining extraction factors ranging from 90% to 95% were applied to underground stope designs. Mining extraction factors of 90 to 95% were applied to underground stopes depending on mining method and stope geometry. Where required, a pillar factor was also applied for sill or crown pillars. A 100% extraction factor is assumed for ore encountered during mine access development.

10. Bulk densities vary by deposit and weathering stage and range from 1.70 t/m<sup>3</sup> to 2.61 t/m<sup>3</sup>. Underground backfill density is 1.00 t/m<sup>3</sup>.

11. Mineral Reserves are reported in dry metric tonnes.

12. Numbers may not add due to rounding.

The Qualified Persons (QPs) are not aware of any environmental, permitting, legal, title, taxation, socio-economic, marketing, political, or other relevant factors that could materially affect the Mineral Resource estimate.

## Note 3 - El Limon Complex Mineral Resource Notes

1. CIM (2014) definitions were followed for Mineral Resources.

2. Mineral Resources are inclusive of Mineral Reserves.

3. Mineral Resources are estimated assuming a long-term gold prices from US\$1,600/oz to US\$1,700/oz and long-term silver prices from US\$20/oz to US\$24/oz.

4. Open pit Mineral Resources are reported within an optimized pit shell above cut-off grades ranging from 1.00 g/t Au to 1.13 g/t Au.

5. Minimum mining widths of approximately 1.0 to 2.0 m were used to model Underground Mineral Resources.

6. Underground Mineral Resource are reported within mineralization wireframes at a block cut-off grade of 2.25 g/t Au, where grade, continuity, and thickness were used to demonstrate Reasonable Prospects for Eventual Economic Extraction, or within resource panels generated at cut-off grades from 2.00 g/t Au to 3.03 g/t Au.

7. Bulk densities vary by deposit and weathering stage and range from 1.86 t/m<sup>3</sup> to 2.85 t/m<sup>3</sup>. Bulk densities for Tailings material range from 1.29 t/m<sup>3</sup> and 1.33 t/m<sup>3</sup>.

8. Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability.

9. Numbers may not add due to rounding.

The Qualified Person (QP) is not aware of any environmental, permitting, legal, title, taxation, socio-economic, marketing, political, or other relevant factors that could materially affect the Mineral Resource estimate.

# Notes to Calibre Mineral Reserve and Resource Slides

## **Note 4 - El Limon Complex Mineral Reserve Notes**

1. CIM (2014) definitions were followed for Mineral Reserves.
2. All Mineral Reserves are classified as Probable Mineral Reserves.
3. Mineral Reserves are estimated assuming long-term gold prices from US\$1,500/oz to US\$1600/oz and long-term silver prices from US\$20/oz to US\$23/oz.
4. Open pit (OP) Mineral Reserves are estimated at cut-off grades ranging from 1.15 g/t Au to 1.20 g/t Au.
5. Underground (UG) Mineral Reserves are estimated at fully costed cut-off grades ranging from 2.30 g/t Au to 3.36 g/t Au, and incremental cut-off grades ranging from 1.92 g/t Au to 2.91 g/t Au.
6. Fully costed cut-off grades include sustaining capital cost allocations for mining and processing.
7. All Mineral Reserve estimates incorporate estimates of dilution and mining losses.
8. Mining extraction factors of 90 to 95% were applied to underground stopes depending on mining method and stope geometry. Where required, a pillar factor was also applied for sill or crown pillars. A 100% extraction factor is assumed for ore encountered during mine access development.
9. Minimum mining widths of range from 1.5 m to 2.0 m depending on mining method and stope geometry.
10. Bulk densities vary between 2.30 t/m<sup>3</sup> and 2.41 t/m<sup>3</sup> for all open pit Mineral Reserves and between 2.47 t/m<sup>3</sup> and 2.50 t/m<sup>3</sup> for all underground Mineral Reserves.
11. Mineral Reserves are reported in dry metric tonnes.
12. Numbers may not add due to rounding.

The Qualified Persons (QPs) are not aware of any environmental, permitting, legal, title, taxation, socioeconomic, marketing, political, or other relevant factors that could materially affect the Mineral Resource estimate.

## **Note 5 – Cerro Aeropuerto (Borosi) Mineral Resource Notes**

1. The effective date of the Mineral Resource is April 11, 2011.
2. CIM definition standards were followed for the resource estimate.
3. The 2011 resource models used Inverse Distance grade estimation within a three-dimensional block model with mineralized zones defined by wireframed solids and
4. A base cutoff grade of 0.6 g/t AuEq was used for reporting mineral resources.
5. Gold Equivalent (AuEq) grades were calculated using \$1,058/oz Au for gold and \$16.75/oz Ag for silver and metallurgical recoveries and net smelter returns are assumed to be 100%
6. Resource Estimates for Cerro Aeropuerto are detailed in the technical report titled 'NI 43-101 Technical Report and Resource Estimation of the Cerro Aeropuerto and La Luna Deposits, Borosi Concessions, Nicaragua' by Todd McCracken, dated April 11, 2011.
7. The quantity and grade of reported inferred resources in this estimation are uncertain in nature and there has been insufficient exploration to define these inferred resources as an indicated or measured mineral resource. It is uncertain if further exploration will result in upgrading them to an indicated or measured mineral resource category.
8. Numbers may not add exactly due to rounding.
9. Mineral Resources that are not mineral reserves do not have demonstrated economic viability.

## **Note 6 – Primavera (Borosi) Mineral Resource Notes**

1. The effective date of the Mineral Resource is January 31, 2017.
2. CIM definition standards were followed for the resource estimate.
3. The 2016 resource models used Ordinary Kriging grade estimation within a three-dimensional block model with mineralized zones defined by wireframed solids (HG=high grade, LG= low grade, sap=saprolite).
4. A base cutoff grade of 0.5 g/t AuEq was used for reporting mineral resources.
5. Gold Equivalent (AuEq) grades have been calculated using \$1300/oz Au for gold, \$2.40/lb for Copper, and \$20.00/oz Ag for silver and metallurgical recoveries are assumed to be equal for all metals.
6. Resource Estimates for the Primavera project are detailed in the NI 43-101 Technical Report titled 'Primavera Project' by Todd McCracken, dated January 31, 2017.
7. The quantity and grade of reported Inferred resources in this estimation are uncertain in nature and there has been insufficient exploration to define these Inferred resources as an indicated or measured resource. It is uncertain if further exploration will result in upgrading them to indicated or measure mineral resource category.
8. Numbers may not add exactly due to rounding.
9. Mineral Resources that are not mineral reserves do not have demonstrated economic viability.
10. Primavera copper resource includes 218,670,000 pounds of copper at a grade of 0.22% Cu, 0.84 g/t AuEq.

# Notes to Calibre Mineral Reserve and Resource Slides

## Note 7 – Pan Open Pit Mineral Reserve Notes

1. Reserves are contained within engineered pit designs based on Lerchs-Grossmann optimized pit shells and using a US\$1,600/oz gold sales price.
2. The date of the surveyed topography is September 30, 2023, and projected to a December 31, 2023 estimated surface.
3. Mineral Reserves are stated in terms of delivered short tons and grade before process recovery. The exception is leach pad inventory, which is stated in terms of recoverable gold ounces.
4. Allowances for external dilution are accounted for in the diluted block grades.
5. Costs used are ore mining cost of US\$3.27/st, a waste mining cost of \$2.27/st, an ore processing of US\$3.17/st; and a G&A cost US\$0.96/st.
6. Reserves for argillic (soft) ore are based upon a minimum 0.003 opt Au (0.10 g/t) internal cut off grade (COG), using a US\$1,600/oz Au sales price and a gold recovery of 85%.
7. Reserves for Silicified (hard) ore are based upon a minimum 0.004 oz/st Au (0.14 g/t) Internal COG, using a US\$1,600/oz Au sales price and a gold recovery of 62%.
8. Mineral Resources have been stated inclusive of in situ Mineral Reserves. Stockpile and leach pad inventory are not included in the Mineral Resources estimate.
9. Numbers in the table have been rounded to reflect the accuracy of the estimate and may not sum due to rounding.

## Note 8 – Pan Open Pit Mineral Resource Notes

1. CIM (2014, 2019) guidelines, standards and definitions were followed for estimation and classification of mineral resources.
2. The estimate of mineral resources may be materially affected by environmental, permitting, legal, marketing or other relevant issues.
3. Resources are stated as contained within a constrained pit shell; pit optimization was based on an assumed gold price of US\$1,700/oz, Silicic (hard) ore recoveries of 60% for Au and an Argillic (soft) ore recovery of 80% for Au, an ore mining cost of US\$2.09/st, a waste mining cost of \$1.97/st, an ore processing and G&A cost of US\$3.13/st, and pit slopes between 45-50 degrees;
4. Resources are domain edge diluted and reported using a minimum internal gold cutoff grade of 0.003 oz/st Au (0.10 g/t Au).
5. Measured and Indicated Mineral Resources presented are inclusive of Mineral Reserves. Inferred Mineral Resources are not included in Mineral Reserves.
6. Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability. There has been insufficient exploration to define the inferred resources tabulated above as an indicated or measured mineral resource, however, it is reasonably expected that the majority of the Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration. There is no certainty that any part of the Mineral Resources estimated will be converted into Mineral Reserves;
7. Numbers in the table have been rounded to reflect the accuracy of the estimate and may not sum due to rounding.
8. Mr. Benjamin Harwood, M.Sc., P. Geo. of Calibre is responsible for reviewing and approving the Pan mine open pit Mineral Resource Estimate. Mr. Harwood is a Qualified Person (“QP”) as set out in NI 43-101. The Qualified Person (QP) is not aware of any environmental, permitting, legal, title, taxation, socioeconomic, marketing, political, or other relevant factors that could materially affect the Mineral Resource estimate.

## Note 9 – Gold Rock Mineral Resource Notes

1. The effective date of the Mineral Resource is Mar 31, 2020.
2. Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability. There is no certainty that any part of the Mineral Resources estimated will be converted into Mineral Reserves;
3. The preliminary economic assessment for Gold Rock is preliminary in nature and includes Inferred Mineral Resources that are too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as Mineral Reserves, and there is no certainty that the preliminary economic assessment will be realized;
4. In the table above and subsequent text, the abbreviation “st” denotes US short tons;
5. Mineral resources stated as contained within a constrained pit shell; pit optimization was based on an assumed gold price of US\$1,700/oz, an ore mining cost of US\$2.09/st, a waste mining cost of \$1.97/st, an ore processing and G&A cost of US\$3.13/st, and pit slopes between 45-50 degrees;
6. Mineral resources are reported using an internal gold cut off grade of 0.003 oz/st Au for blocks flagged as Argillic altered or as unaltered and a cutoff of 0.004 oz/st Au for blocks flagged as Silicic altered.; and,
7. Numbers in the table have been rounded to reflect the accuracy of the estimate and may not sum due to rounding.

## Note 10 – Golden Eagle Mineral Resource Notes

1. The effective date of the Mineral Resource is Mar 31, 2020
2. The Qualified Person for this estimate is Terre Lane of GRE
3. Mineral Resources are not Mineral Reserves and do not demonstrate economic viability.
4. Numbers in the table have been rounded to reflect accuracy of the estimate and may not sum due to rounding.
5. The Mineral Resource is based on gold cutoff grade of 0.014 troy ounces per short ton (0.48 grams per tonne) at an assumed gold price of \$1,500/tr oz, assumed mining cost of \$1.06/st waste, assumed mining costs of \$2.02/st mineralized mineral, assumed processing case of \$12.75/st mineralized material, assumed G&A cost of \$0.74/st mineralized material, an assumed metallurgical recovery of 80% and pit slopes of 45 degrees.
6. The pit layback is not constrained to Fiore controlled land. Additional land must be acquired or otherwise made available for the pit layback, waste rock dumps, tailings facilities, and other surface infrastructure.

# Notes to Valentine Mineral Reserve and Resource

QA/QC protocols followed at the Valentine Gold Mine include the insertion of blanks and standards at regular intervals in each sample batch. Drill core is cut in half with one half retained at site, the other half tagged and sent to Eastern Analytical Limited in Springdale, NL. Eastern Analytical is ISO 17025 accredited for Atomic Absorption Spectroscopy for gold following fire assay preparation methods and is independent of Calibre. All samples are analyzed for Au by fire assay (30g) with AA finish. Samples that assayed greater than or equal to 300 ppb gold were subjected to a total pulp metallic sieve procedure. Samples that fall within mineralized zones that are <300 ppb are also reanalyzed by screen metallics. The analytical results are captured in an acQuire database, which is programmed to utilize the screen metallic values over the standard fire assays if data is available.

Mr. Roy Eccles, P. Geo. (PEGNL), of APEX Geoscience Ltd., is the Qualified Person responsible for the review and acceptance of responsibility of the July 2022 Mineral Resource estimated prepared by John T. Boyd Company. Mr. Marc Schulte, P.Eng., of Moose Mountain Technical Services, is the Qualified Person responsible for the preparation of the Mineral Reserves estimate. Messrs. Schulte and Eccles are Qualified Persons as set out under NI 43-101 and are independent of Calibre.

## Note 11 – Valentine Gold Mine Mineral Resource Notes

1. CIM (2014) definitions were followed for mineral resources.
2. The effective date for the Leprechaun, Berry, and Marathon MREs is June 15, 2022. The effective date for the Sprite and Victory MREs is November 20, 2020. The independent Qualified Person, as defined by NI 43-101, is Mr. Roy Eccles, P. Geo. (PEGNL) of APEX Geoscience Ltd.
3. Open pit mineral resources are reported within a preliminary pit shell at a cut-off grade of 0.3 g/t Au. Underground mineral resources are reported outside the pit shell at a cut-off grade of 1.36 g/t Au. Mineral resources are reported inclusive of mineral reserves.
4. Mineral resources are estimated using a long-term gold price of US\$1,800 per ounce, and an exchange rate of 0.76 USD/CAD.
5. Mineral resources reported demonstrate reasonable prospect of eventual economic extraction, as required under the CIM 2014 standards as MRRM.
6. The mineral resources would not be materially affected by environmental, permitting, legal, marketing, and other relevant issues based on information currently available. 7. Numbers may not add or multiply correctly due to rounding.

## Note 12 – Valentine Gold Mine Mineral Reserve Notes

1. The mineral reserve estimates were prepared by Marc Schulte, P.Eng. (who is also an independent Qualified Person), reported using the 2014 CIM Definition Standards, and have an effective date of November 30, 2022.
2. Mineral reserves are mined tonnes and grade; the reference point is the mill feed at the primary crusher.
3. Mineral reserves are reported at a cut-off grade of 0.38 g/t Au.
4. Cut-off grade assumes US\$1,650/oz Au at a currency exchange rate of US\$0.78 per C\$1.00; 99.8% payable gold; US\$5.00/oz off-site costs (refining and transport); and uses an 87% metallurgical recovery. The cut-off grade covers processing costs of \$15.20/t, administrative (G&A) costs of \$5.30/t, and a stockpile rehandle cost of \$1.85/t.
5. Mined tonnes and grade are based on a smallest mining unit (SMU) of 6 m x 6 m x 6 m, including additional mining losses estimated for the removal of isolated blocks (surrounded by waste) and low-grade (<0.5 g/t Au) blocks bounded by waste on three sides.
6. Numbers have been rounded as required by reporting guidelines.

# Calibre Disclosure

## Non-IFRS Measures

This presentation refers to various non-IFRS measures, such as “AISC”, “total cash costs per ounce sold”, “average realized price per ounce sold” and “free cash flow”. These measures do not have a standardized meaning prescribed by IFRS as an indicator of performance, and may differ from methods used by other companies. Please also see the Company’s MD&A for the three (Q2 2024) and six (YTD 2024) months ended June 30, 2024 for a discussion of non-IFRS measures and reconciliations, which information is incorporated by reference herein and which is available under the Company’s profile on SEDAR+ at [www.sedarplus.ca](http://www.sedarplus.ca). The non-IFRS measures are intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS.

## All-In Sustaining Costs per Ounce of Gold Sold (“AISC”)

AISC is a performance measure that reflects the expenditures that are required to produce an ounce of gold from current operations. While there is no standardized meaning of the measure across the industry, the Company’s definition is derived from the definition, as set out by the World Gold Council in its guidance dated June 27, 2013 and November 16, 2018, respectively. The World Gold Council is a non-regulatory, non-profit organization established in 1987 whose members include global senior mining companies. The Company believes that this measure is useful to external users in assessing operating performance and the ability to generate free cash flow from operations. The Company defines AISC as the sum of Total Cash Costs (per below), sustaining capital (capital required to maintain current operations at existing production levels), capital lease repayments, corporate general and administrative expenses, exploration expenditures designed to increase resource confidence at producing mines, amortization of asset retirement costs and rehabilitation accretion related to current operations. AISC excludes capital expenditures for significant improvements at existing operations deemed to be expansionary in nature, exploration and evaluation related to resource growth, rehabilitation accretion not related to current operations, financing costs, debt repayments, and taxes. Total AISC is divided by gold ounces sold to arrive at a per ounce figure.

## Total cash costs per ounce of gold

Total cash costs include mine site operating costs such as mining, processing and local administrative costs (including stock-based compensation related to mine operations), royalties, production taxes, mine standby costs and current inventory write downs, if any. Production costs are exclusive of depreciation and depletion, reclamation, capital and exploration costs. Total cash costs per gold ounce are net of by-product silver sales and are divided by gold ounces sold to arrive at a per ounce figure.

## Average Realized Price per Ounce Sold

Average realized price per ounce sold is a common performance measure that does not have any standardized meaning. The most directly comparable measure prepared in accordance with IFRS is revenue from gold sales.

## Free Cash Flow

Free cash flow is a non-IFRS financial performance measure that does not have any standardized meaning under IFRS and therefore may not be comparable to similar measures presented by other issuers. The Company defines “free cash flow” as cash generated from operations and proceeds of sale of other assets less capital expenditures on mining interests, lease payments, settlement of non-current derivative financial liabilities. The Company believes this non-IFRS financial performance measure provides further transparency and assists analysts, investors and other stakeholders of the Company in assessing the Company’s ability to generate cash flow from current operations. “Free cash flow” is intended to provide additional information only and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. This measure is not necessarily indicative of operating profit or cash flows from operations as determined under IFRS.

Readers should refer to the “Non-IFRS Measures” section of the Company’s Management’s Discussion and Analysis for the period ended March 31, 2024, available at [www.sedar.com](http://www.sedar.com), for a further discussion of AISC, total cash costs per ounce of gold sold and average realized price per ounce sold, along with reconciliations to the most directly comparable IFRS measures.
